

**Careers with DXC**

ASEAN

## Where will a career at DXC Technology take you?

Graduates: Accelerate your career with us!

Embark on your journey at DXC with these advantages:

- Opportunities to build your network and get hands-on experience on real projects with prestigious customers
- On-the-job learning — including access to a range of self-paced online courses to further develop your skills and knowledge in the areas that interest you

We provide a supportive environment that helps you maximise your full potential — with your manager, assigned buddy and the wider DXC community right by your side, accompanying you on your journey.

“DXC Technology has provided me with a great environment to cultivate and grow my skill set by giving opportunities to work on client projects right from the start. I was given the chance to learn and understand the complexities involved in handling projects whilst applying and refining the technical skills I have previously learnt. I am thankful to be working in such an exciting space with knowledgeable colleagues who are always happy to provide guidance.”

— **Nicholas**  
Associate professional,  
Data Sciences

## Choose your pathway!

DXC offers a variety of opportunities across different role types — so you can match your work to your tertiary background, skill set and career aspirations.

We help you find what you truly love, learn new things and develop skills beyond “just IT” so that you excel in your role and all aspects of our business.

### Application developer

Application developers apply their specialised knowledge to conceptualise, design, develop, unit-test, configure and implement portions of new or enhanced business and technical software solutions. You will interact with different DXC customers and stakeholders to gain an understanding of the business environment, technical context and organisational strategic direction.

The application developer defines the scope, plans and deliverables and uses the appropriate tools to identify, analyse and resolve business and technical problems. In addition, you will apply metrics to monitor performance, measure key project parameters, prepare system documentation, ensure that security and quality standards are met and stay informed on emerging tools, techniques and technologies.

### Business analyst

Our business analysts work collaboratively with customers and stakeholders to research, elicit, analyse, validate and document business requirements, and ensure that these requirements reflect business needs. You will translate those business needs into system/application requirements and project components to help determine solutions to business problems.

In addition, you will support your team in producing functional requirements for tool development, proactively identifying and managing changes to requirements and identifying risks for DXC’s customers and effectively managing their expectations. You will have the opportunity to apply your industry and IT expertise to supporting proposals, feasibility studies, implementations and new business development.

“Being part of DXC Technology is a great experience that ... happened to me. I am able to showcase my skills and learn more on the diversity of work culture here. I look forward to all of the excitement and challenges that lie ahead. Thank you for this opportunity!”

— Chau Man  
IT developer

## Finance analyst

As a Finance analyst, you will support DXC Finance improvement initiatives whilst running cadence meetings with business stakeholders. You will work on improving analytics and providing insights using monthly financial reports and data. You will also work on ad hoc requirements, supporting other initiatives both within the region and globally.

## Business consultant

As a business consultant, you will provide general services and play a key support role in creating and delivering business solutions for DXC customers. You will work in conjunction with senior consultants to begin building your knowledge and experience in the areas of business process design, workshop facilitation, analytic assessments and industry-specific practices and requirements. You will also take part in work sessions and interviews with different businesses and technical representatives, occasionally as an observer but more often as an active participant.

## Sales

In a Sales role, you will work collaboratively with customers and stakeholders to identify and develop opportunities. You will also research, analyse and validate the suitability of DXC offerings to satisfy customer needs and ensure those offerings reflect true business needs. You will translate those needs into commercial propositions and support customer executives and customer partners in developing and presenting value propositions, proposals and presentations. You will work closely with Sales leaders and customer partners to successfully

pursue opportunities and build Sales capability. You will also maintain ownership of assigned tasks and opportunities and perform related pipeline hygiene activities.

## Marketing

In a Marketing role, you will work collaboratively with the Marketing and Communications team to coordinate marketing events and assist with end-to-end execution of marketing campaigns. This may include updating content on the DXC website and supporting SEO and SEM strategy to increase page views and performance of DXC web pages. You will also assist with all aspects of content development, including customer case studies and thought leadership, and work on publishing social media content via various marketing channels. You may also assist with marketing operations including budget management, updating the marketing calendar and post-campaign metrics, reporting and reviews.

## Network engineer

As a DXC network engineer, you will work on integrations and installations on customers' current network infrastructure. You will assist in testing and documenting current network technology baselines for both hardware and software solutions to determine networking needs, develop technical standards and interface applications, gather information and investigate issues whilst recommending possible solutions.

## Cybersecurity

As part of the Cybersecurity team at DXC, you will assist with auditing computer systems to ensure they are operating securely, and that data is protected from both internal and external attacks. You will support security assessments and monitor, evaluate and assist with maintaining assigned security systems per industry best practices to safeguard internal information systems and databases. You will provide support for system reviews to determine if the systems comply with established standards.

In your role, you will participate in investigating security violations and breaches whilst preparing reports on intrusions, as needed. Additionally, you will review firewall logs across an assigned area and assist with configuration of firewalls, intrusion detection systems and other network security devices across designated areas.

## Human resources

While working in Human Resources at DXC, you will cycle through all areas of the team. Initially, you are most likely to provide HR generalist support. To excel in this area, you will learn and try new things, have excellent communication skills, both written and verbal, and the ability to understand the connection between business problems and people solutions.

## Project management

As a professional in project management at DXC, you will gain experience in relevant office functions, project control functions and overall project management. You will work with more experienced

project staff to begin building knowledge and experience in areas such as scheduling, financial management, delivery assurance, reporting, project governance and stakeholder management. You will support project managers and will have the opportunity to oversee and lead small projects to develop your project management skills.

## Sales Solutions (Pre-sales)

In DXC's Sales Solutions, you will be involved in the full sales life cycle, from initial customer contact to contract signature. You will assist the team in developing, prototyping and demonstrating solutions for opportunities based on the understanding of customer needs, develop a working knowledge of DXC's products/solutions and gain exposure to direct selling, developing winning proposals and pricing solutions.

## Release Management

As part of your role in Release Management at DXC, you will manage high volumes of notifications of application and infrastructure releases via email and service management queues for our customers. You will also plan, coordinate and deploy daily, weekly or monthly scheduled changes. To succeed in this role, you should excel at customer service and be able to quickly develop business relationships with all stakeholders and service providers whilst proudly representing DXC.

## Test engineer

In the test engineer role at DXC, you will learn the latest and greatest new test tools to ensure quality products and services are delivered

to all our customers. You will use test management tools, including automated test tools, for functional and non-functional testing, i.e., of performance and security.

## Desktop engineer

In a DXC desktop engineer role, you will provide technical assistance and support for incoming queries and issues related to desktop support, mobile device management and videoconferencing support. You will resolve incidents and upgrade different types of software and hardware, including installation of new hardware for customers, such as new monitors, docking stations or keyboards. Your role may also include diagnosing and resolving software and hardware incidents, including operating systems (Windows 10) and across a range of software applications on the customer's machine (Office applications, Outlook, Skype for Business, etc.)

## Software engineer

As a software engineer at DXC, you will take part in detailed software design, including analyzing and establishing requirements, architectural and low-level designs, and software production. You will also work on defining test criteria and testing for all software units that you have developed, peer review of software developed by others, as well as collaboration with other team members to learn and gain additional relevant skills.

## Systems engineer

In a DXC systems engineer role, you will assist in the design and development of basic integrated solutions through tools, processes and procedures to facilitate cost-effective delivery of services. You will perform basic testing and integration, maintenance and escalated problem resolution of computer environments such as embedded systems, desktop, mainframe, midrange, servers and other systems, as appropriate.

## Service Desk

In a Service Desk role, you will resolve technical issues (hardware and software) from incoming internal or external businesses and an end user's contacts and proactive notification systems. You will respond to queries related to service, product, technical and customer relations subjects such as features, specifications and repairs on current and discontinued products, parts and options, based

on customer entitlement (warranty through mission-critical). You will proactively assist internal or external businesses and end users to avoid or reduce problem occurrence, as well as evaluate unique or complex installations or configurations and recommend resolution.

## Technical consultant

In a technical consultant role for DXC, you will provide general technical consulting services and play a key support role in creating and delivering technical solutions for customers. Working in conjunction with more experienced technical staff, you will begin building knowledge and experience in technical software, application delivery tools, testing strategies and packaged applications.

## Application support

In the application support role, you will provide maintenance and support for a mission-critical system. You will

provide day-to-day application support for reported production issues and resolve within the stipulated service level agreement (SLA), per classified severity in terms of knowing and understanding the issue. You should investigate and analyse to determine root cause(s); provide corrective and preventive solutions; escalate a case to an L3 or technical support for further investigation, if required; ensure successful and timely completion of application batch jobs; and propose improvements to address recurring issues and close monitoring gaps.
